### DETAILED ACTION

Claims 1-11 are pending.

#### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 2, 7, and 8, drawn to a method of eliciting an anti-tumor effect in a subject comprising delivering at least one nucleic acid into a tumor of the subject and applying an energy source to the at least one nucleic acid, wherein the energy source comprises electrical output, classifiable in class 424, subclass 93.2.
- II. Claim 3, drawn to a method of eliciting an anti-tumor effect in a subject comprising delivering at least one nucleic acid into a tumor of the subject and applying an energy source to the at least one nucleic acid, wherein the energy source comprises sonic output, classifiable in class 424, subclass 93.2.
- III. Claim 4, drawn to a method of eliciting an anti-tumor effect in a subject comprising delivering at least one nucleic acid into a tumor of the subject and applying an energy source to the at least one nucleic acid, wherein the energy source comprises photonic output, classifiable in class 424, subclass 93.2.
- IV. Claim 5, drawn to a method of eliciting an anti-tumor effect in a subject comprising delivering at least one nucleic acid into a tumor of the subject and applying an energy source to the at least one nucleic acid, wherein the energy source comprises microwave output, classifiable in class 424, subclass 93.2.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated because each invention uses a different source of energy to deliver the nucleic acid to the subject. The specification does not disclose that the inventions are capable of use together.

Claims 1, 6, and 9-11 link(s) inventions I-IV. The restriction requirement between the linked inventions is subject to the nonallowance of the linking claim(s), claims 1, 6, and 9-11. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Because these inventions are distinct for the reasons given above and the literature search required for each Group listed above is not required for any other group listed above and the

Art Unit: 1635

search for each group is not co-extensive, restriction for examination purposes as indicated is proper.
